

## Grammar

### Part 6 -

$\{V, T, P, S\}$  Quaduple  
variable / virtues.

$V \rightarrow$  set of non-Terminal (~~small~~) Capital

$T \rightarrow$  set of Terminal symbol (~~capital~~) small

$P \rightarrow$  Production rule (Auto & we will compute strings for a L)  
& d. way of representing language.

$S \rightarrow$  start symbol

$P$  - Production rule for presented

LHS  $\rightarrow$  RHS  $\rightarrow$  H.o.S.  
 $\epsilon, ab, a^2b^2, a^3b^3 \dots$   
 $\epsilon'$  single N.T segment  $\rightarrow \epsilon | \text{string}$  & Terminal & NT

$$A \rightarrow aB$$

$$B \rightarrow \epsilon$$

$$C \rightarrow b$$

$\epsilon, abba$

$$A \rightarrow aBc$$

$$\textcircled{Q} \quad S \rightarrow SS$$

$$S \rightarrow aSB$$

$$S \rightarrow bSa$$

$$S \rightarrow \epsilon$$

$aSb \quad bSa$   
 $ab \quad ba$

$$S \rightarrow aSb | \epsilon$$

$$\epsilon \quad \underline{ab} - \underline{aab}$$
  
 $a^n b^n$

## Regular Grammar

$\{V, T, P, S\}$

LHS  $\rightarrow$  R.H.S.

single non-terminal

$\rightarrow \epsilon$

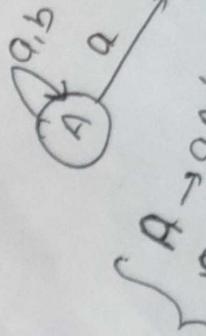

Terminal

$\rightarrow$  Terminal followed by NT

$\rightarrow$  NT followed by Terminal

$RE =$        $A \rightarrow \epsilon \quad \checkmark$        $A \rightarrow a$   
 $A \rightarrow aB \quad \checkmark$        $A \rightarrow Ba \quad \checkmark$   
 $A \rightarrow Ab \quad \checkmark$   
 $A \rightarrow aBb \quad \times$

regular

### Left linear Grammar (LLG)

if NT is on the LHS or RHS,  
 $D \rightarrow Ab$

### Right linear Grammar (RLG)

if NT is rightmost  
 $RG \rightarrow PA$

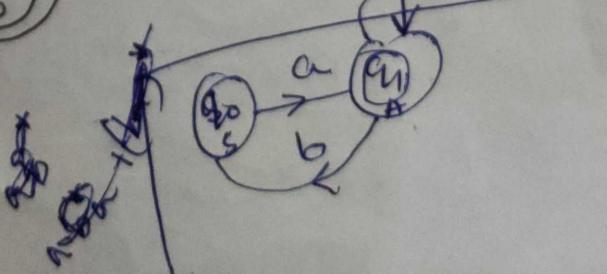

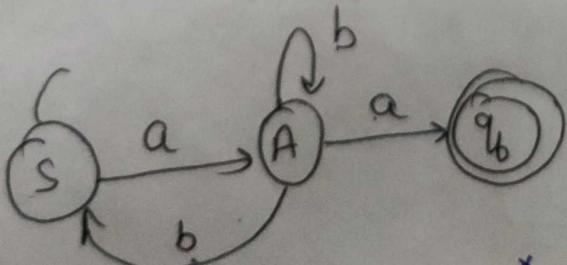

$$C \rightarrow aA.$$

Q 1st of regular grammar is given by  $S \rightarrow aS \mid a$  final  
~~see example~~  
~~M accepting L(G)~~  
 $a$   
 $\xrightarrow{S} \xrightarrow{a} \xrightarrow{q_b}$

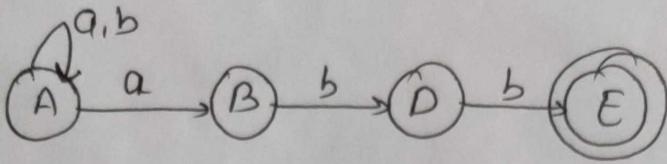

$$M = \{ a^* q_b \}, \Sigma = \{ a \}, S, q_0, q_b$$

Q 2nd  $S \rightarrow aA, A \rightarrow bA \quad A \rightarrow a \quad A \rightarrow bS.$

$$\begin{aligned} S &\rightarrow aA \\ A &\stackrel{?}{=} \overbrace{bA/a}^{a/b} \end{aligned}$$

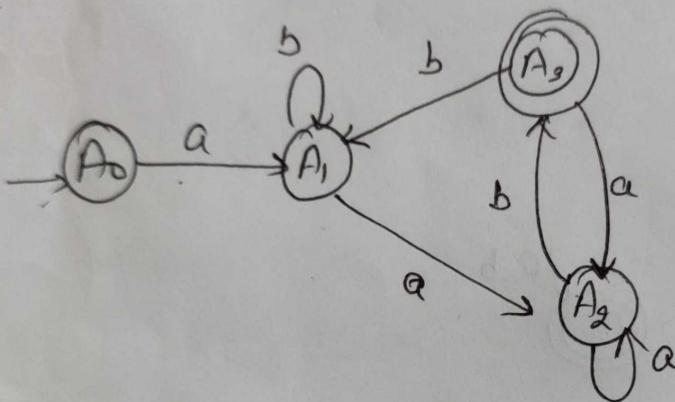

regular grammar for N DFA

$$P = \left\{ \begin{array}{l} A \rightarrow aA / bA / aB \\ B \rightarrow bD \\ D \rightarrow bE / b \\ E \rightarrow \Lambda. \end{array} \right.$$

$$G = \{ \{A, B, D, E\}, \{a, b\}, P, A \}$$

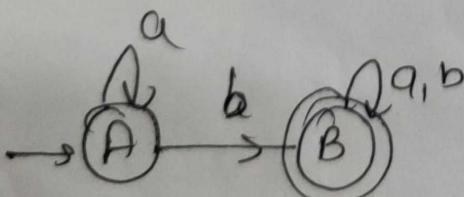

Q

construct regular grammar from DFA

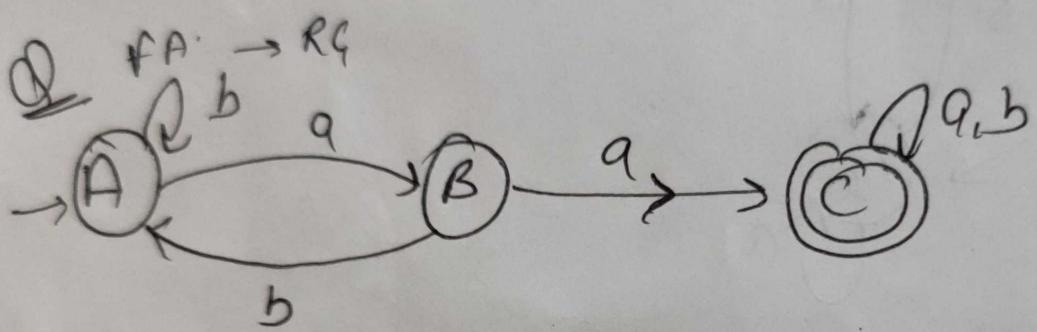

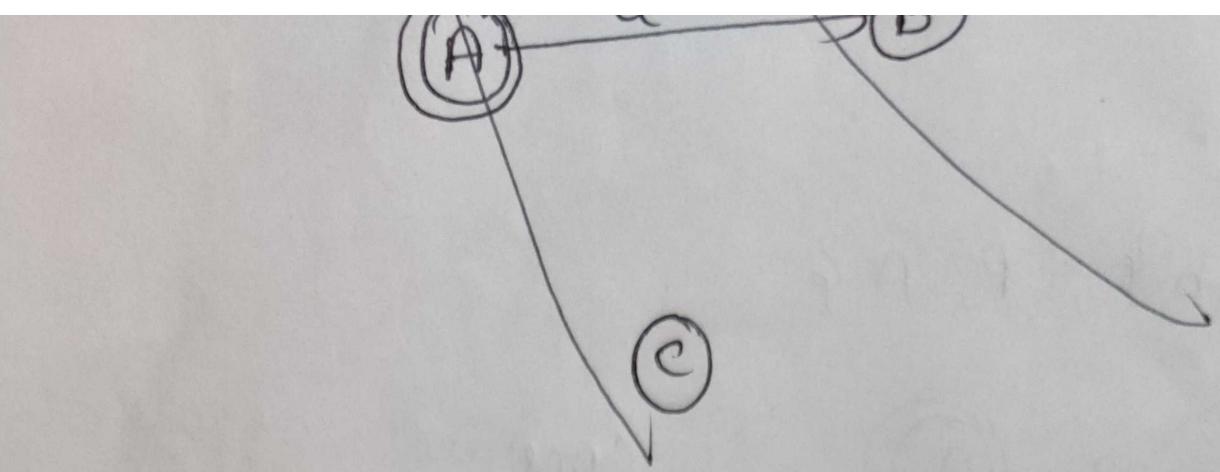

$$\begin{aligned} A_0 &\rightarrow aA_1 \\ A_1 &\rightarrow bA_1 / aA_2 \\ A_2 &\rightarrow aA_2 / bA_3 \quad | \quad b \\ A_3 &\rightarrow bA_1 / aA_2 / \epsilon \end{aligned}$$

Q

QV, T, R, S, }

$$P = \left\{ \begin{array}{l} A \rightarrow aA / b / bB \\ B \rightarrow aB / bB / \epsilon \\ B \rightarrow a / b \end{array} \right\}$$

$\{ A \rightarrow bA \mid aB$   
 $B \rightarrow aC \mid bA \mid a$   
 $C \rightarrow aC \mid bC \mid a \mid b \}$

Chomsky Hierarchy:- (Noam Chomsky in 1956)  
language - used to express. (Language → Grammar)  
↳ Syntax (Keywords)  
↳ Semantic (meaning | Grammar)

Type 3 (Regular Grammar) — RL | FA

Type 2 (Context free Grammar) — CFL | PDA

Type 1 (Context sensitive Grammar) — CSL | LBR

Type 0 (unrestricted Grammar) — REL | TM<sup>A</sup>  
B)

Type 0 Recursive Enumerable grammar /  
unrestricted Grammar

→ used to generate Recursive enumerable language  
— age (REL) which accepted by TM.

$$\alpha \rightarrow \beta$$

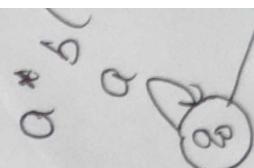

$$\alpha \in (\epsilon \cup V_n)^* \quad V_n \in (\epsilon \cup V_n)^*$$

$$\beta \in (\epsilon \cup V_n)^*$$

RG

(~~Restricted~~)

Restricted Grammar

$$\alpha \rightarrow \beta$$

$$|\alpha| = 1$$

$$A \rightarrow a | Ba$$

$$\beta = VT^* | T^* | T^* V$$

$$[A] = [B] = 1 \quad A, B \in V_n$$

} FA  
DFA NDFA

A → a | ab  
RG

$$A \rightarrow BC$$

$$(A \rightarrow aba) \times$$

CFL

$$\alpha \rightarrow \beta$$

$$A \rightarrow BC \quad \checkmark$$

$$\alpha \in V_n \quad |\alpha| = 1$$

$$\beta \rightarrow (\Sigma V_n)^*$$

No restriction on  $\beta$ .

Type I

CSG (length increasing grammar) non contracting grammar

$$\alpha \rightarrow \beta$$

$$\beta \in (\Sigma V_n)^+$$

$$|\alpha| \leq |\beta|$$

$$\alpha \in (\Sigma V_n)^* V_n (\Sigma V_n)^*$$

Type 0  $\alpha \rightarrow \beta$

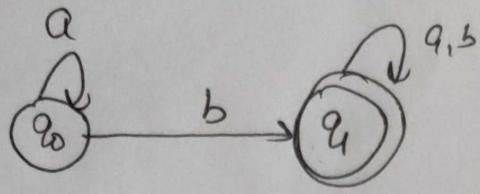

there should be at least one symbol left hand side.

ex

$$\text{Type 1} \quad A \rightarrow \epsilon \quad X$$

$$AaB \rightarrow bb \quad X$$

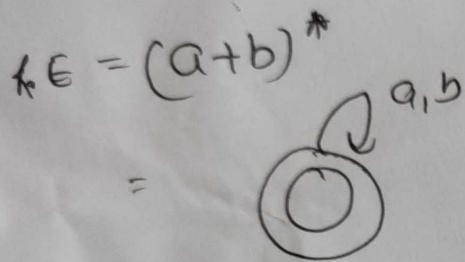

$$a^* b(a+b)^*$$

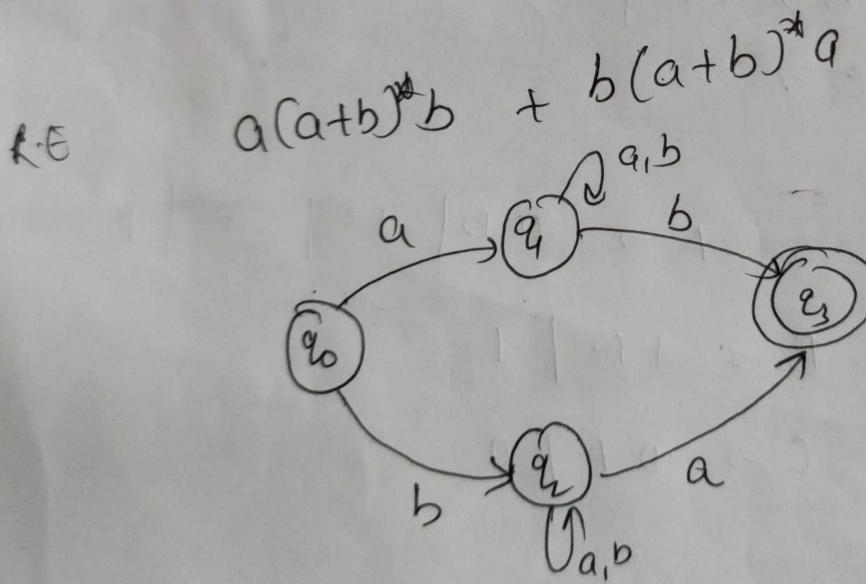

$$q_0 \rightarrow a$$

$$q_0 \rightarrow b, q_1 | b$$

$$q_1 \rightarrow aq_1 | bq_1 | q_1 | b$$

$$A \rightarrow aA. | bA | a | b$$

$$q_0 \rightarrow aq_1 | bq_2$$

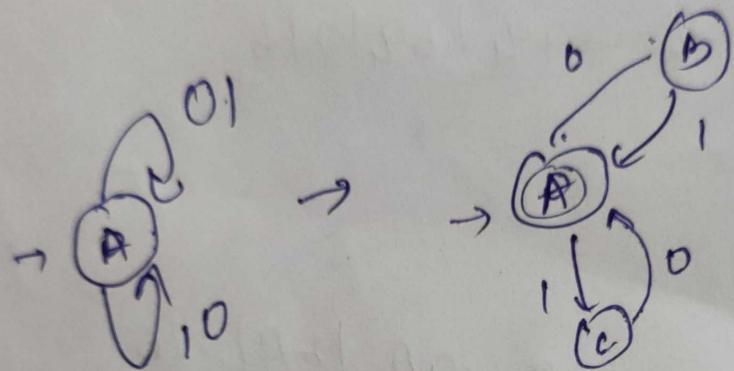

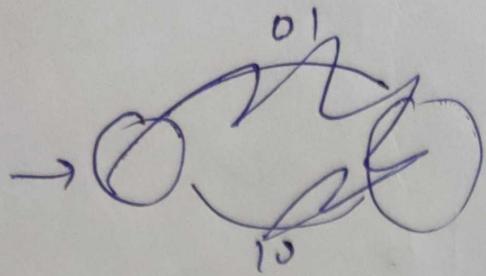

$$q_1 \rightarrow aq_1 | bq_1$$

$$q_2 \rightarrow aq_2 | bq_2$$

$$q_1 \rightarrow bq_3 | b$$

$$q_2 \rightarrow aq_3 | a$$

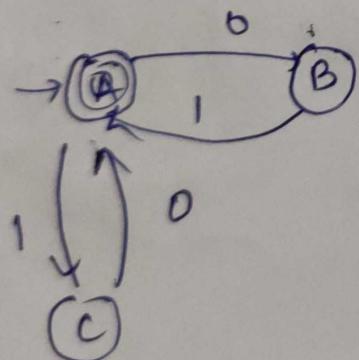

$(01 + 10)^*$

$A \rightarrow 0B \mid 1C$

$B \rightarrow 1A \mid$

$C \rightarrow$

$A \rightarrow 0B \mid 1C \mid \cancel{0A} \mid$

$B = 1A \mid 1$

$C \rightarrow 0A \mid 0$

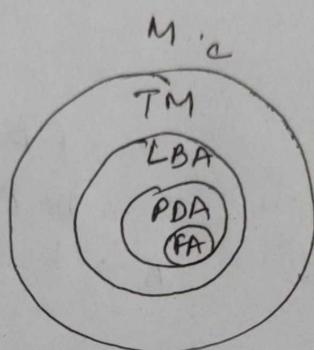

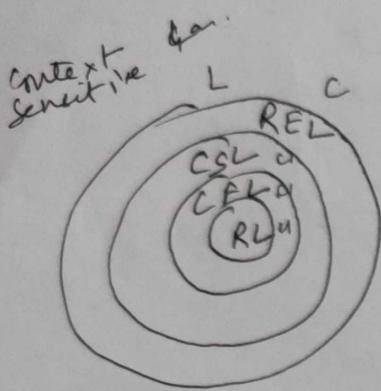

Language → Grammar  
 ↓  
 Computers — ??

$$G = (\Sigma, V_n, P, S)$$

↓  
 Prod. Rule

Syntax & Semantics

After see P. we can see the type  
 of Grammar.

Net → holes → which → kuch bhi pass.

From simple → complex data will pass  
 complex → simple .. .

Type 0 / Recursive Enumerable  
 Grammar or

Unrestricted Grammar.

$$\underline{\alpha} \rightarrow \beta$$

$$G = (V_n, \Sigma, P, S)$$

$$\alpha \rightarrow (\underbrace{\Sigma \cup V_n}_{\text{Terminal}})^* \quad (V_n) (\Sigma \cup V_n)^*$$

$$\beta = (\underline{\Sigma \cup V_n})^*$$

$\alpha \neq \text{null}$

### Type 1

Content Sensitive Grammar / length grammar.

not used much  
Research is still open

$$\alpha \rightarrow \beta$$

$$\alpha \in (\Sigma U V_n)^* v_n (\Sigma U V_n)^* \xrightarrow{\text{CSG}}$$

$$\beta \in (\Sigma U V_n)^* \xrightarrow{\text{CSL}}$$

$$|\alpha| \leq |\beta| \xrightarrow{\text{diff}}$$

$$\downarrow \xrightarrow{\text{LBA}}$$

e.g.  $\frac{A}{\text{length}} \xrightarrow{\text{+}} \frac{E}{0}$

$$\begin{array}{l} AB \rightarrow A B b c \\ A \rightarrow b c A \\ B \rightarrow b \end{array} \xrightarrow{\text{Type 1}}$$

$E$  is not included in Type 1.

$$\overline{A \rightarrow a}.$$

$$\begin{array}{l} X A Y \rightarrow a \\ P A Q \rightarrow a \end{array}$$

$$\cancel{(A B)} \rightarrow \cancel{(S B)}$$

### Type 2

Content free Grammar

$$\alpha \rightarrow \beta \quad \text{non terminal}$$

$$\alpha \in \text{Vn} \quad |\alpha| = 1$$

$$\beta \in (\Sigma U V_n)^*$$

Compiler  $\rightarrow$  CFG.

CFG

## Conversion

FA  $\rightarrow$  RG

initial state in  
FA is initial symbol in  
RG.

A  $\rightarrow aB|a$

B  $\rightarrow aB|bB|\epsilon$

↓ Reverse

A  $\rightarrow Ba|a$

B  $\rightarrow Ba|Bb|\epsilon$

(LR)

gmp

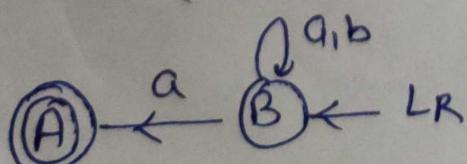

FA  $\rightarrow$  RLG  
(L)

Reverse

LLG  
(L<sup>R</sup>)

So to get same language L for LLG

FA  $\rightarrow$  FA  $\rightarrow$  RLG  
(L<sup>R</sup>)  $\xrightarrow{R}$  LLG  
(L<sup>R</sup>)<sup>R</sup> = L

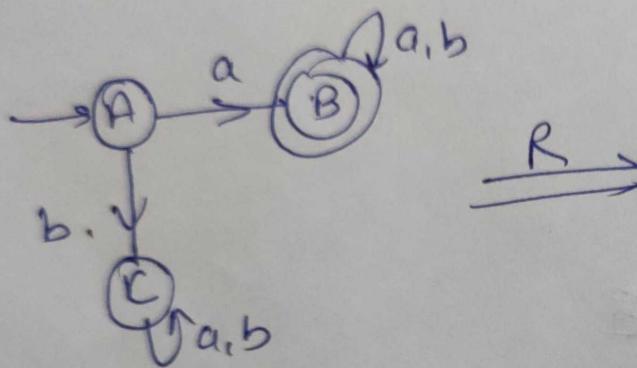

B  $\rightarrow aB|bB|aA|a$

A  $\rightarrow \epsilon$

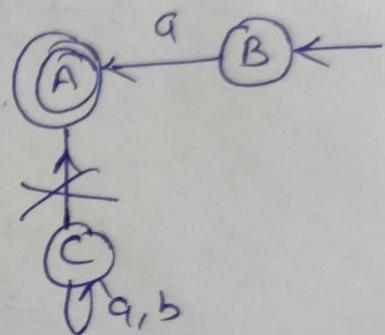

LLG.

for reversal of FA's

1. Draw the FA first.
2. Make initial as final & final as initial.
3. Reverse the transition, loop ~~will~~ will remain same
4. Remove non-reachable state

$\xrightarrow{R}$

Result can  $L^R$  be.  
NFA  
OR  
DFA

$$\text{Prove } (1 + \infty^* 1) + (1 + \infty^* 1) (0 + 10^* 1)^* (0 + 10^* 1) \\ = \infty^* 1 (0 + 10^* 1)^*$$

$$(1 + \infty^* 1) [ \wedge + (0 + 10^* 1)^* (0 + 10^* 1) ] \\ (1 + \infty^* 1) [ 0 + 10^* 1 ]^* \quad (\epsilon + a^* a) \Rightarrow a^*$$

$$(\infty^* \wedge) + (0 + 10^* 1) \\ 0^* 1 (0 + 10^* 1)$$

Show that  $(0^* 1^*)^* = (0+1)^*$

Consider

$$\text{LHS } (0^* 1^*)^*$$

$$= \{ \epsilon, 0, \infty, 1, 11, 01, 10, \dots \}$$

= {any combination of 0's & any

combination of 1's & any combination  
of 0's & 1's. i.e.

$$\text{R.H.S} \equiv (0+1)^* \\ = \{ \epsilon, 0, \infty, 1, 11, 01, 10, 111, 00, \dots \}$$

$$\text{LHS} \equiv \text{R.H.S}$$

## Equivalence of two RE

$$(a+b)^* = a^*(ba^*)^*$$

$0, a, a$   
 $b, bb$   
 $ab$
